

Executive Summary

KE Town is a riverine Kalabari community in Degema Local Government Area (LGA) of Rivers State, Nigeria ¹ ². It is one of eleven villages in Degema LGA ³ ², a coastal area covering ~1,011 km² (2006 population ~249,773) ⁴. KE Town lies in the eastern Niger Delta, with mangrove swamps and waterways; colonial records note it predates the main Kalabari migration to the Niger Delta ⁵. The community speaks the Kalabari (Awome) dialect of the Ijaw language ¹ ⁶. Kalabari cultural practices (maskings, dance, festivals) are central to local life ⁷ ⁸. Traditional governance is a hereditary monarchy (an Amanyenabo “king” and council of chiefs) within the wider Kalabari kingdom ⁹ ¹⁰. Economically, fishery and aquaculture dominate (fishing is “abundant” in Degema) ¹¹, alongside small-scale farming. Oil industry infrastructure runs near KE Town, and illegal oil bunkering has damaged local vegetation ¹². Infrastructure is limited: transport is mainly by water or poorly maintained roads, electricity and telecoms are sporadic, and basic services (schools, health clinic, markets) are minimal or unreported.

The community lacks a formal online presence (no official website); only informal Facebook pages or cultural media (e.g. Kalabari TV on YouTube) exist. Information gaps are large: exact population of KE Town, detailed local history, and comprehensive data on infrastructure and institutions are not found in published sources. We recommend primary research (archival study, interviews with chiefs/elders, surveys, and field visits) to fill these gaps.

This report presents our detailed findings with references, identifies missing data, and outlines a plan for a KE Town community web-app. The web-app plan covers content and technical architecture (site pages, features, data models, APIs, CMS/hosting), UX/UI design (sitemap, wireframes), implementation roadmap (milestones, effort/cost), and trade-off tables for CMS and hosting choices. We include suggested visuals (photos, mermaid diagrams) to illustrate Kalabari culture, information architecture, and data models.

Detailed Findings

History & Origins

KE Town is part of **Ke Kingdom**, one of the historic Kalabari polities in the Niger Delta ¹ ¹³. Colonial records note that *Ke* (like neighboring Kula and Bille) existed *before* the main Kalabari migrations to the region: the 1950 Justice Robinson report states “Kula (like Bille and Ke) was established before the arrival of the Kalabaris at the Old Shipping (Elem-Kalabari)” ⁵. In other words, KE Town was an older riverine settlement that later became part of the Kalabari kingdom. Detailed oral origins are not documented in reliable sources. One local legend (unverified) claims Kalabaris descend from seven sky-creatures with a python-rope, but no authoritative record of KE Town’s founding is available.

Under colonial and post-colonial administration, KE Town fell under the Degema Division (later Degema LGA). Degema LGA was created in the 1960s, and KE Town is listed among its villages ². The area was originally populated by diverse Ijaw (Ijaw) groups; Kelwans categorize KE Town among the

“Awome” (Kalabari) subgroup. The Kalabari people themselves trace lineage to an ancestor Perebo Kalabari ¹⁴, but KE Town’s specific lineage (founder’s name, origin village) is not recorded in published history.

Culturally, KE Town shares Kalabari traditions. Kalabari legends (not KE-specific) speak of a water goddess *Awamenakaso* and a spirit hierarchy ¹⁵. European-era accounts (e.g. G.I. Jones) note that Elem-Kalabari (the original Kalabari center) had many islands and that their “powers came from deities in the water” ¹⁶. It can be inferred KE Town follows similar animist beliefs syncretized with Christianity today. More research with local chiefs or cultural scholars (e.g. Ijaw Congress) could uncover KE Town’s founding family and any unique origin lore.

Geography & Environment

KE Town lies in the **eastern Niger Delta**, a low-lying riverine swamp. (The Degema LGA center is at ~4.8°N, 6.8°E ⁴ ¹⁷.) The terrain is flat mangrove and freshwater swamp forest near the Atlantic coast (the community is a “minutes’ drive” from the ocean per local accounts ¹). The village likely occupies tidal creeks and islands; precise coordinates for KE Town itself are not published. Land use in Degema LGA is mainly smallholder agriculture (cassava, plantains, oil palm, vegetables) and fishing aquaculture in farm ponds. Oil palm groves are common in the area, as with much of Rivers State. Google Earth shows scattered buildings and farmland along waterways. No national park or nature reserve is reported in KE Town specifically.

A recent environmental study reported that **pipeline infrastructure** crosses the KE Town area ¹². The IRJAES study notes the “buildup of oil bunkering fires” around Bille and Ke, and identifies local pipelines (FUGRO codes SANBT001, KRACTL001, BUDCTL001) traversing north-south through the region ¹². This suggests that multinational oil and gas pipelines (likely carrying crude or fuel) lie near KE Town and have been targets of illegal tapping. The study observed burnt vegetation due to oil fires in KE’s “neighborhood” ¹². These findings indicate environmental risks (pollution, fire) linked to oil infrastructure.

Coordinates/Maps: No precise map of KE Town was found online. Degema LGA maps (Nigeria admin map, Google Maps) can serve as a rough guide. KE Town lies east of Degema town proper, near the Bille/Usokun area. A web-app could embed an interactive map centered on Degema LGA with a marker for KE Town. Recommended action: obtain GPS coordinates via field survey or high-resolution satellite imagery to allow precise mapping in the app.

Demographics & Population

There is **no published census data specifically for KE Town**. At the LGA level, the 2006 census recorded Degema LGA at ~249,773 people ⁴. Current estimates (projected growth) might be ~300,000 by 2025, but this is for the whole LGA, not KE Town. KE Town is one of 11 villages in Degema ³ ²; a rough guess (if population evenly split) would be on the order of 20–30,000, but this is speculative. We must mark the exact population of KE Town as **unknown**. Obtaining an estimate would require field surveys or LGA administrative data.

Ethnically, KE Town is predominantly **Kalabari Ijaw (Awome)**. The broader Kalabari people number around a few hundred thousand (Wikipedia lists 448,000, though this may count multiple Ijaw subgroups ¹⁸). All residents likely speak the Kalabari language (a variety of Ijaw), possibly alongside English or Pidgin for

schooling/business ⁶ . Kalabari has about 258,000 speakers reported (2005) ⁶ . Religion is mainly Christianity (Anglican, Catholic, Pentecostal), as it is for most of Degema ¹⁹ , mixed with remnants of traditional beliefs (water spirits).

Kalabari Culture & Language

KE Town is culturally **Kalabari**, a subgroup of the Ijaw. The Kalabari language (an East Ijoid language) is spoken by locals ¹ ⁶ . Children likely learn Kalabari at home, with English used in schools. A Kalabari learning program ("Kalabari TV" YouTube) exists, underscoring interest in language preservation. We confirm: "*Kalabari is an Ijo language of Nigeria spoken in Rivers State...by the Awome people*" ⁶ , so KE Town residents speak this language.

Cultural practices of Kalabari include **masquerades, dance, music, and elaborate festivals**. Weddings and child-naming, etc., follow Kalabari customs (e.g. the *Igwa Sime* traditional marriage rites ²⁰). We did not find KE-specific rituals, but general Kalabari traditions apply. For example, Kalabari weddings involve ceremonies like *Bibife* ("buying the mouth" of the bride) ²¹ . Traditional priests (Odiebo or Adumu societies) and water spirit worship (goddess Awamenakaso) are part of older customs ¹⁵ . These likely persist alongside Christianity.

Figure: A Kalabari masquerade headdress, illustrating the colorful, sculptural masks used in dance rituals. Such masquerades are central to Kalabari festivals and ceremonies, expressing ancestral stories and community unity.

Festivals are very important. The Kalabari **New Year Festival** at Elem-Kalabari (the spiritual center) is celebrated by all Kalabari communities, including KE Town ²² . Dignitaries gather annually, and the occasion involves drumming, dance, and ancestral commemoration. Other festivals include the *Owu-Aru-Sun* (ancestral commemoration with masquerades) ⁷ and cultural boat regattas (common in Ijaw cultures). According to a 2025 Guardian report, "*Kalabaris unite after centuries... at Elem-Kalabari, their ancestral land, to celebrate a 'New Year' festival... as a symbol of unity*" ²² . KE Town, as part of Ke Kingdom, would participate in this shared culture.

Figure: Kalabari cultural attire at a festival. Men wear George cloth wrappers and hats; women adorn lace blouses, headscarves and coral beads ²³ . KE Town residents similarly dress in vibrant fabrics for ceremonies.

Kalabari art (masks, sculptures) is distinctive – see the pipligbo water spirit head-dress (illustrated in [50]). Community elders ("fathers") often wear coral beads. Music uses drums (egbere) and rattles. We did not find formal listings of Kalabari dances, but observers note the "graceful dances and dramatic masquerade performances" of Kalabaris ⁸ . The cultural emphasis on togetherness ("spirit of togetherness" ²⁴) suggests KE Town values communal events.

Governance & Administration

Traditionally, KE Town (like other Kalabari communities) recognizes a hereditary ruler titled **Amanyabo** (king or paramount chief) and a council of chiefs (often drawn from ruling "houses" or clans). This mirrors the broader Kalabari Kingdom: "The King along with his Council of Chiefs, most of whom are royal princes, make up the Kalabari royal court" ²⁵ . In KE Town's case, an Amanyabo of Ke Kingdom would be the local monarch, supported by chiefs from the warrior-lineage houses (e.g. Kemsaipruye-Igbo, as mentioned in

news ²⁶). Succession is typically patrilineal. For example, the Guardian article mentions “*the paramount head of the Kemsaipruye-Igbo group of houses, Ke Town*”, implying this group is headed by a senior chief (Alhaji Daud Oduboye Peniel) ²⁷ . Unfortunately there is no published list of the Ke Amanyabo or chiefs, nor election/selection rules.

KE Town falls under the **Degema LGA** administratively. Rivers State’s local government system places all villages in wards. The Degema LGA government (based in Degema town) provides basic services and local governance. We did not find the exact ward name for KE Town. Local governance bodies (Community Development Committees, village councils, youth organizations) likely exist by customary practice.

The 1935 colonial “Intelligence Report” on Kalabari noted the prevalence of chieftaincy titles (Amanyabo, Alapu, etc.) ⁹ . Today, KE Town’s chiefs would operate alongside elected local councillors under Nigerian law. Rivers State also recognizes traditional rulers; the Ke Amanyabo would be officially gazetted if classified (probably lower-tier). We found no specific mention of state recognition for the Ke stool, unlike Kula where disputes were litigated ²⁸ .

Economy & Occupations

KE Town’s economy is **subsistence and artisanal**. **Fishing** (riverine fishing and aquaculture) is a key livelihood. Degema LGA “is a fish producing area because of the abundance of water bodies” ¹¹ , and a related study confirms fish farming in Degema communities (including Ke) was surveyed ³ . Many families likely operate fish ponds or fish for sale locally. Given the coastal setting, fishing likely includes finfish, prawns and the local periwinkle/snail harvest. Agriculture is also common: villagers grow cassava, plantains, vegetables, and harvest oil palm (palm oil, palm kernels). This is typical for Kalabari villages, though we found no KE-specific crop data.

Livestock (poultry, goats) may be kept on a small scale. In the past, Kalabari traded fish and palm oil upriver to Port Harcourt (the trading states history ²⁹); however today KE Town’s markets are probably local (weekly fish/food market). There is no mention of large industries or employers in KE Town itself. However, the presence of oil pipelines suggests oil/gas infrastructure may provide some casual jobs (e.g. pipeline maintenance, security), albeit controversial due to illegal tapping. The recent study notes **illegal oil bunkering** (“Kpo-fire”) is prevalent ¹² , which indicates both the presence of pipelines and a shadow economy of fuel theft. Local youths may be engaged in this illicit trade.

Trade and services are minimal. A roadside market likely serves KE Town and nearby villages, but we found no documentation of its name or schedule. Remittances from town or abroad (Port Harcourt, Bayelsa) may supplement incomes, as in other Delta communities. In sum, KE Town’s economy is rural-coastal: fishing, farming and small trade, with some impact from oil infrastructure.

Infrastructure & Services

Roads: KE Town is accessible mainly by river or muddy tracks. Degema LGA is known for poor road connectivity. No tarred highways reach KE Town; connections likely involve bush paths and bridges. The “Degema-Abonnema Road” project has long been under construction ³⁰ , but that connects Degema to ports and does not directly reach KE Town. In practice, commuters use boats (canoes) on creeks to reach larger towns.

Electricity: There is no data on electrification in KE Town. Most rural Niger Delta villages have intermittent power (NEPA/PHCN grid is often unreliable). It is likely KE Town has minimal or no steady grid supply. Some homes may use generators or solar panels for lighting. We recommend on-the-ground survey to confirm presence of the power grid or alternative energy installations.

Water & Sanitation: River/creek water is abundant, but not potable. Villagers likely boil or chlorinate creek water; some may have boreholes or wells. No official water scheme is mentioned in sources. Sanitation is mostly traditional (bush/kitchen gardens or pit latrines); again no data is available.

Telecom: Rivers State generally has mobile coverage (MTN, Airtel) in towns. Coverage in mangrove areas can be patchy, but many Nigerian villages have at least 2G/3G signal. No specific coverage maps for KE Town were found. The web-app could integrate a map of mobile coverage (e.g. from OpenCellID) to illustrate connectivity.

Internet: Likely via mobile networks or satellite. Smartphone penetration is growing, so many young people probably have social media (e.g. they maintain Facebook groups for their communities).

Schools: We could not find official listings. One snippet mentions “*State School Bokokiri, KE Town*” in Degema ³¹ (though no official site). We presume there is at least one primary school. There are probably no post-primary schools in KE Town itself; older students attend secondary schools in Degema or other towns. Literacy is likely rising, but exact rates unknown.

Health: A “Ke Primary Health Centre” is listed in a hospital directory ³² (name suggests a local clinic). If true, KE Town has a basic clinic providing immunizations and minor treatments. Otherwise the nearest hospital is in Degema town. No public health statistics for KE Town exist.

In summary, infrastructure in KE Town is **rudimentary**. We note: “*roads, power and water infrastructure are limited or absent*”, so any web-app should be lightweight (mobile-friendly, low-bandwidth). Enabling offline content or SMS features might be considered for low-connectivity users.

Institutions & Landmarks

We found no authoritative list of KE Town’s institutions. Likely landmarks include: - **Churches:** Christianity is dominant, so there are churches (Anglican, Catholic, Pentecostal). A social media post (Facebook) mentions “*St. Gabriel’s Anglican Church*” in Ke Town ³³ (though not citable here). If verified, this would be a historical parish. It’s safe to include *Anglican and Catholic worship centers* as community pillars. - **Schools:** We mentioned *State School Bokokiri*. Possibly a *community primary school* exists. There are probably no secondary schools in the village. - **Markets:** Possibly a weekly fish/food market (“Eke market” or similar) where locals sell produce. No records found. - **Health center:** As above, *Ke Primary Health Centre* is listed online. This and any pharmacy would be crucial for residents. - **Palace:** The traditional ruler’s palace (Amanyabo’s house) is a cultural landmark, though not publicized. - **Waterways:** The creeks themselves (for canoe routes) are effectively the town’s roads.

These should be verified by field interviews. For now we note them as **to-be-validated** by local sources. The web-app might eventually include a map with pins for “Ke Primary Health Centre”, “St. Gabriel’s Anglican Church”, etc., once their details are confirmed.

Culture, Oral History & Notables

No famous national figure is known to hail from KE Town. It is the seat of Ke Kingdom, so the Amanyabo (king) is a notable local dignitary. News mentions the “*paramount head of the Kemsaipruye-Igbo houses, Ke Town*” (Alhaji Daud Oduboye) ²⁷ as a local community leader advocating for unity. We found no record of any major historical event *specifically in KE Town* (no wars or treaties, etc.), although the general area saw colonial contact and trade.

Oral histories likely exist among elders (e.g. family origin stories), but none appear in written sources. One example from a regional context: Bonny/Calabar traders noted Kalabari as “civilized and peaceful” in the 15th century ¹⁵ – KE Town’s ancestors would have been part of that. We list “Notable events/people” as **data gaps**; we recommend interviews with chiefs, elders and women’s leaders to document community history and biographies.

Online Presence & Media

KE Town has **little official online footprint**. No dedicated website or NGO page exists. A Facebook page “KE TOWN – A coastal community in Degema LGA” (with a few hundred followers) posts local news and history (source not citable here). The All Ijaw Cultural Congress blog covers Ke Town culturally ¹. Nearby Kalabari communities use social media: *Kalabari TV* (YouTube) produces language lessons, and there are Instagram pages for Kalabari culture. There is no local newspaper for KE Town. As such, much current information is spread by word of mouth or Facebook.

Social media: Residents (especially youth) likely use Facebook and WhatsApp to stay in touch. The Guardian’s 2025 article ³⁴ suggests some Kalabari elites engage with mainstream media and tourism boards. A web-app could integrate social feeds or encourage user submissions (with moderation).

Existing websites: The Rivers State Ministry of Info site briefly mentions Degema LGA but not villages. Academic research on Ijaw culture often omits specific villages. We found that the Joshua Project profiles “Degema people (Awome)” ³⁵ but it lumps Kalabari villages (including Ke) under “Degema Atala” language group. A thorough search yielded no offline archives of KE Town, implying primary research is needed.

Legal & Ethical Considerations

When building a community site, privacy and respect are paramount. Personal data (names, images) of KE residents must not be published without consent. Any photographs of individuals (even in public events) should be Creative Commons or have release forms. Many Kalabari cultural images (e.g. masks, attire) are in the public domain (see Wikimedia [50]), but caution is needed for modern photos (the above image [52] has an attribution license).

Cultural sensitivity: Sacred knowledge (e.g. of water spirits) should be handled carefully and not trivialized. Intellectual property (traditional stories, music) belongs to the community; permission should be sought before publication.

Data rights: If the app collects user data (comments, profiles), it must comply with Nigerian data protection norms and respect user privacy. Since KE Town may have a largely low-income population, the digital divide and consent literacy are issues: only collect minimal, necessary information and explain usage clearly.

Attribution: We will use only free-licensed or original content for visuals. The Wikimedia Commons images we embed (e.g. [51],[52],[54]) are CC0/CC-BY-SA. Any map data (e.g. OpenStreetMap) will be properly credited.

Stakeholder engagement: Ethically, the community should be involved in the web-app's content. Interviews with chiefs and elders should follow interview ethics (informed consent, possible anonymity). The plan is to use the app as a tool for the people of KE Town, not an extractive project by outsiders.

Data Gaps & Research Recommendations

Numerous specifics about KE Town remain **unknown** from published sources. In particular: - **Population and demographics** of KE Town (age structure, literacy, occupations) – not found.

- **Exact history/origin** (founder's name, migration story) – missing.
- **List of institutions** (names of all schools, churches, clinics) – partly missing.
- **Current economic data** (income levels, land ownership, major crops/fish catch volumes) – unknown.
- **Detailed infrastructure status** (electricity coverage, road condition, cell signal strength) – unreported.
- **Oral history and cultural specifics** (unique Ke traditions) – undocumented.

To fill these gaps, we recommend **primary field research**: - Conduct **interviews and focus groups** with elders, chiefs, women's groups and youth in KE Town to document oral histories, governance structure, and communal values.

- **Household surveys** or questionnaires (possibly with local NGO partnership) to estimate population, economic activities, and education levels.
- **GPS mapping** of the village to list all landmarks (schools, churches, market, health clinic, waterways).
- Collaboration with local government (Degema LGA) to obtain any census or administrative data.
- Engagement with academics or cultural organizations (Ijaw Congress, Kalabari scholars) for historical context.

Any future web-app should incorporate a mechanism (feedback form, content submission feature) to allow KE Town residents to contribute new information, photos, and updates, thus continuously reducing data gaps.

Content Inventory

Below is a proposed outline of content/pages for the KE Town web-app, based on the research above:

- **Home Page:** Introduction to KE Town (location map, key facts), with an overview of vision (preserve and share culture).
- **About / Key Facts:** Summary of history, geography, population (with citations), and a photo slideshow (maps, village scenes).

- **History & Origins:** Narrative of KE Town’s founding (including colonial-era notes ⁵ and any known legends), timeline, historic events (if any), illustrated with archival images or illustrations.
- **Geography & Environment:** Description of the deltaic landscape, climate, ecology (mangroves, waterways), with map (interactive) and satellite images if possible. Discuss pipeline issues ¹² and environmental concerns.
- **Culture & Traditions:** Articles on Kalabari culture as practiced in KE Town – language (Kalabari), wedding customs, naming rites, etc. Use images ([51], [52], [54]) and possibly short videos of dances/masquerades.
- **Language:** Dedicated section or widget teaching basic Kalabari phrases (leveraging Kalabari TV content) and explaining Ijaw language heritage ⁶.
- **Festivals & Events:** Describe major Kalabari festivals (New Year festival at Elem, Owu-Aru-Sun) with dates, activities (drumming, masquerades). Possibly calendar of upcoming events and photo gallery.
- **Governance & Chiefs:** Info on traditional governance: current Ke Amanyababo and chiefs, royal houses, and Degema LGA administration (ward info). Include any known biographies (with consent) of chiefs.
- **Economy & Occupations:** Outline of local livelihoods: fishing, farming, trading, oil-related activities. Could include infographics (e.g. a pie chart of occupations) or a map of fishing ponds. Cite fisheries fact ¹¹.
- **Infrastructure & Facilities:** List of roads (boat routes), utilities (power/water status unknown), telecom info, schools (if any), health center (if confirmed). Possibly an embedded OpenStreetMap showing schools, churches, clinics.
- **Institutions & Landmarks:** Profiles of major local institutions (e.g. “Ke Community Primary School”, “St. Gabriel’s Anglican Church” if verified) and cultural sites (palace, shrine).
- **Notable People:** Biographies or mentions of notable residents (chiefs, activists). Currently data sparse, but space reserved for updates.
- **Gallery:** Photo/video archive of KE Town scenery, ceremonies, daily life. All media must be public-domain or clearly licensed. Could include historical photos if available (with permissions).
- **News & Social Media:** Feeds or links to community social pages (e.g. KE Town Facebook, Ijaw cultural news, LGA announcements).
- **Contact & Feedback:** Form for visitors to contact admins or submit stories/images, with privacy notice. Possibly links to Degema LGA council or cultural organizations.

Each content page should cite authoritative sources where available (e.g. history page citing ⁵). Unverified content (oral tales, user contributions) should be clearly marked as such. Multilingual: at minimum English text, with key terms in Kalabari (e.g. names of festivals) and possibly a bilingual toggle if translations into Kalabari can be arranged (perhaps using local volunteers for translation).

A **Content Inventory Table** might look like:

Page/Section	Content Highlights	Media Required
Home	Map of KE Town in Rivers State; brief introduction (1–2 paragraphs); latest news headlines.	Banner photo (village scene)
History & Origins	Colonial citations on founding (1950s report ⁵); oral tradition; timeline.	Historical documents, old maps/illustrations if any

Page/Section	Content Highlights	Media Required
Culture & Traditions	Kalabari Ijaw customs; marriage rites (Igwa Sime); language info (cite 6); clothing, art.	Photos [51],[52],[54], museum artifacts
Festivals	Descriptions of New Year festival 22, Owu-Aru-Sun, community gatherings.	Video/Photo of dance & masquerades
Governance	Structure (Amanyababo, chiefs, connection to Kalabari Kingdom 10); LGA ward info.	Photo of palace or council meeting
Geography & Land Use	Location description; coordinates (4.8N,6.8E) 4; ecology (mangroves); pipeline issues 12.	Satellite map, environmental photos
Demographics	LGA population 4; note that KE pop is unknown; languages, religion.	Infographic (pie chart)
Economy	Fishing (citing 11), farming, (mention pipelines & oil bunkering 12).	Chart or photo of fishermen
Infrastructure	Roads (mostly waterways), electricity (likely spotty), water sources, telecom.	Diagram of village layout or utilities
Institutions	List of schools, churches, clinic (if confirmed); market.	Icons or photos of each
People & Legends	Chiefs names (if available), any local heroes; call for adding oral histories.	Elder portraits (with consent)
Gallery	User-submitted images (with credit); traditional artifacts (from commons)	Image tiles
Contact/Feedback	Form, links to LGA, social media, legal notice.	-

All factual content should be cited from government, academic, or media sources as above. The content inventory guides which pages and content items the web-app needs.

Technical Web-App Plan

Features & Functionality

The web-app for KE Town should be *informational and community-oriented*. Key features:

- **Responsive Front-End:** Mobile-first design; pages adapt to phones since many users may only have mobile internet.
- **Content Management:** Admin/Editors can add/edit pages, news, galleries (via a CMS or static-site generator).
- **Language Support:** Content primarily English, with Kalabari glossary or full bilingual support. Ideally, implement an i18n framework (e.g. WordPress Polylang or Drupal Locale).

- **Interactive Map:** Embed an OpenStreetMap (OSM) view of KE Town, with markers for schools, churches, health center, etc. Possibly use Mapbox or OSM API. GeoJSON can be used for land use overlays.
- **Media Gallery:** Photo/video gallery module (with lightbox), to showcase culture. Ensure uploaded media is appropriately licensed/attributioned.
- **News/Announcements:** A blog/news section for posting local news, events, and updates.
- **Event Calendar:** If festivals or town meetings have dates, a calendar or timeline widget.
- **User Contributions:** (Future) ability for registered users to submit stories, event reports, or photos (subject to admin review).
- **Search:** Search box to find content by keywords.
- **Offline/Low-Bandwidth Mode:** Possibly a lightweight mobile app or PWA with caching, for users with poor internet (if resources allow).

User Roles

Proposed user roles, with associated permissions:

- **Administrator:** Full control. Can manage site settings, users, content, themes. Requires technical access.
- **Editor:** Can create/edit pages, blog posts, events, upload media, moderate user submissions.
- **Contributor (Future Role):** Trusted local user who can submit content drafts (e.g. news tips) but cannot publish without review.
- **Registered User:** (Optional) Can comment on posts, submit photos or stories through forms. Their contributions are reviewed by editors.
- **Visitor/Guest:** Can view all public content and submit feedback via contact form. No login required.

Role-based access can be implemented via the chosen CMS's user management (e.g. WordPress roles or Drupal permissions).

Data Model & APIs

The app will manage data on communities, events, institutions, etc. An **example data model** (entities and relationships):

```
erDiagram
    COMMUNITY ||--o{ INSTITUTION : has
    COMMUNITY ||--o{ PERSON : includes
    COMMUNITY ||--o{ EVENT : organizes
    INSTITUTION ||--o| PERSON : managed_by
    PERSON ||--o{ EVENT : participates_in
    EVENT }o--|| LOCATION : held_at
    COMMUNITY {
        string name
        string description
        float latitude
        float longitude
    }
```

```

}
INSTITUTION {
    string name
    string type          // e.g. School, Church, HealthCenter
    string description
}
PERSON {
    string name
    string role          // e.g. Chief, Teacher, etc.
}
EVENT {
    string name
    date date
    string type          // Festival, Meeting, etc.
}
LOCATION {
    float latitude
    float longitude
    string description
}

```

Each **Community** (here mainly “KE Town”) links to Institutions (schools, churches, market, health center), People (notables, chiefs), and Events (festivals, meetings). For example, an *Event* “Elem New Year Festival 2025” would have a date, type “Festival”, and be associated with Community “KE Kingdom” or “Kalabari”. Institutions (e.g. “State School Bokokiri”) have type “School” and could have a related Person (the headmaster).

APIs: If dynamic data is needed, we might use or create RESTful APIs. Possibilities include: - **Map API:** Mapbox or Leaflet (OpenStreetMap) API to display maps and geolocation. - **CMS APIs:** Some CMS (headless WordPress, Drupal JSON, or Strapi) can expose content via REST/GraphQL, which could feed a separate frontend. - **External Data:** If weather or demographic APIs are needed (not essential). - For multi-language, a translation API or plugin may be used to manage Kalabari translations (though human translation is preferable).

If a static-site generator is used, data would be stored in Markdown/JSON and built into HTML; dynamic APIs would be minimal.

CMS Options

We compare several CMS/static approaches:

- **WordPress (WP):**
- *Pros:* Very user-friendly, large community, many plugins (e.g. for multilingual – Polylang), WYSIWYG editor for non-technical admins, media library, good user management, built-in comments.
- *Cons:* Heavier resource use, security maintenance needed, reliance on plugins for advanced features.
- **Drupal:**

- *Pros:* Flexible data modeling, strong permissions system, good for multilingual out of the box, robust taxonomy.
- *Cons:* Steeper learning curve, more complex to set up and maintain, fewer user-friendly themes/plugins than WP.
- **Static Site (Jekyll/Hugo/Gatsby):**
 - *Pros:* Fast, secure (no server-side dynamic code), easy to host on GitHub Pages or Netlify (free SSL), version-controlled content.
 - *Cons:* Less friendly for non-tech editors (requires markdown editing), limited interactivity (though can use JavaScript), no native user login system.
- **Wagtail (Django CMS):**
 - *Pros:* Modern Python-based, good for structured content, multilingual support via packages.
 - *Cons:* Requires Python/Django hosting expertise, smaller community.
- **Strapi/Headless CMS:**
 - *Pros:* Modern, headless approach (back-end content API, front-end can be anything), supports multiple languages, customizable.
 - *Cons:* More development overhead, not as turnkey for non-tech.
- **Plone or SharePoint:** Not relevant for a community site.

Given budget and skills, **WordPress** is a common recommendation for community sites because of ease of use. A multilingual plugin can cover Kalabari, and map galleries/plugins exist. If security is a concern, we must budget for regular updates or use a managed WP hosting. A static site might be appealing to avoid ongoing costs, but then we lose dynamic features (comments, easy editing).

We should include a table comparing CMS options (see “Comparison Tables” section).

Hosting & Infrastructure

Potential hosting scenarios:

- **Shared PHP Hosting (for WP/Drupal):** e.g. cPanel host (~\$5-10/month). Pros: low cost, easy setup. Cons: performance may suffer under traffic spikes.
- **Managed WordPress Hosting:** (e.g. WP Engine, Flywheel) ensures security and backups, but more expensive (~\$30+/mo). Possibly overkill for small traffic.
- **VPS or Cloud VM (AWS EC2, DigitalOcean Droplet):** Self-managed; more control, can run WP or static site. Requires sysadmin skills. Cost ~\$10-20/mo for small droplet.
- **Container/Kubernetes (for Strapi or Node-based):** Likely unnecessary complexity.
- **Static Hosting (GitHub Pages, Netlify, Vercel):** Free or very low cost. Great for static site (Jekyll/Hugo). Supports HTTPS. Not suitable if we need login or CMS features.

Security: Regardless of host, use HTTPS (SSL). Keep software patched. Use firewall/ fail2ban, regularly back up the database and media. For user data (if any), comply with Nigerian data laws (not as stringent as GDPR but apply best practices).

We should consider **offline backup** of all content (database dumps, media files) and regular updates of the CMS core/plugins or static site generator.

Accessibility & Multilingual

The site must follow accessibility standards (WCAG 2.1) since it is public service: - Use clear fonts, high contrast, alt text on images, and semantic HTML. - Ensure keyboard navigation works (for users with motor disabilities). - Provide captions/transcripts for videos if any. - Test with a tool (e.g. WAVE) on key pages.

Multilingual support: English is primary, but including Kalabari would honor local identity. If we add Kalabari translations, we should use native script (Latin alphabet). The Kalabari language site uses a modified Latin alphabet without diacritics ⁶, so multilingual plugin can handle it. Alternatively, have a sidebar glossary of terms (Kalabari words for local institutions or customs).

Mobile-first design: Given the likely prevalence of smartphone use, the UI should be tested on small screens. Clickable areas large enough, text readable without zoom. We should plan a responsive layout (e.g. Bootstrap-based or flexible grid).

UX/UI Suggestions

The web-app should be **simple and intuitive**. Suggested layout:

- **Navigation Bar:** Fixed top menu with links (Home, History, Culture, Economy, Infrastructure, Gallery, Contact). Possibly a dropdown for Culture (Festivals, Traditions) or a sidebar for subpages.
- **Homepage Hero:** A banner image (e.g. panoramic KE Town or mangrove creek). Overlay with tagline ("Welcome to Ke Town, Kalabari Community in Rivers State").
- **Home Sections:** Quick facts (LGA, population, coordinates ⁴), latest news/events teaser, and a map widget showing location.
- **Footer:** Include contact info, social media links (Facebook), and credit/copyright.

Each subpage follows a two-column layout on desktop (narrow column for navigation, wide for content) and stacks on mobile. Use bullet lists and headings for readability.

Sitemap (example):

```

    Home --> Contact
    History --> Origins
    History --> Timeline
    Culture --> Language
```

```

Culture --> Customs
Festivals --> New_Year_Festival
Festivals --> Owu_Aru_Sun
Governance --> Chiefs
Infrastructure --> Roads
Infrastructure --> Electricity
Institutions --> Schools
Institutions --> Churches
Institutions --> HealthCentre

```

Wireframe Descriptions:

- *Home*: Banner image, below it 2–3 featured blocks (e.g. “Our Story”, “Latest News”, “Contact Us”). Quick stats box (area, LGA, pop). Footer.
- *History Page*: Left menu of History subtopics, right content with paragraphs and images (maybe a timeline graphic).
- *Culture Page*: Photo gallery or slideshow of dancers/costumes; text sections on marriage, crafts, food.
- *Festivals Page*: Tabbed sections (or subpages) for each festival, with videos or photo carousel.
- *Interactive Map*: A page or section showing an embedded map (Leaflet) with pins for KE Town institutions and points of interest.
- *Contact Page*: Email form, coordinates, perhaps a QR code to WhatsApp chat.

Ensure consistent design: Kalabari motif or palm-tree iconography could be used (tastefully). Use a color palette inspired by local environment (e.g. blues/greens, coral accents). Fonts should be legible (sans-serif).

No UI elements should rely solely on color (accessibility). For example, use both color and icon for menu selection.

Implementation Roadmap

We propose a phased plan with milestones, effort and cost estimates:

Milestone	Description	Effort	Cost Range
Requirements & Design	Finalize content plan, hire designers, create mockups/wireframes.	2–3 weeks	Low (0–\$2k)
Content Collection	Research details, gather images (CC-licensed or with consent).	4–6 weeks	Low (volunteer)
Frontend Development	Build UI templates (HTML/CSS/JS) and navigation as per design.	2–4 weeks	Medium (\$\$)
Backend/CMS Setup	Install/configure CMS or static build system. Develop data models (communities, posts, events).	2–3 weeks	Medium (\$\$)
Feature Implementation	Develop map integration, gallery, forms, multilingual support.	4–6 weeks	High (\$\$\$)

Milestone	Description	Effort	Cost Range
Testing & Review	Usability testing, bug fixes, accessibility audits.	2 weeks	Low (\$)
Deployment	Set up hosting, domain, security (SSL), backups.	1 week	Low (\$)
Launch & Training	Go live; train local admin/volunteers on CMS usage.	1–2 weeks	Low (volunteer)
Maintenance	Ongoing content updates, software updates, user support.	Ongoing	Medium (annual)

- **Effort/Cost key:** “Low” ~ volunteer or small contract (\$0–2k), “Medium” ~ professional freelancer (\$2k–5k), “High” ~ development team (\$5k+).
- Initial build (non-iterative) could be done in ~3 months by a small team.
- Maintenance requires periodic updating (especially if using WP, need monthly patches). Budget maybe 10–20% of initial cost per year for hosting and updates.

Potential Timeline (6 months): Requirements/Content (Month 1), Development (Months 2–4), Testing/Launch (Month 5), Buffer & Training (Month 6).

Costs can be kept low (e.g. using open-source CMS, volunteer contributions, university partnerships). Hiring local tech talent or NGOs could reduce costs.

Comparison Tables

CMS Comparison

Feature	WordPress	Drupal	Static Site (Jekyll)	Wagtail/Django
Ease of Use	Very easy for editors (admin UI) ⁴	Moderate (more complex UI)	Low (requires Markdown/code)	Moderate
Multilingual	Good plugins (Polylang)	Built-in Locale support	Possible via build	Plugins available
Media/Gallery	Built-in media library, many gallery plugins	Modules exist	Custom JS needed	Good (Django admin)
Map Integration	Plugins (Leaflet, Mapbox)	Modules (Leaflet)	Custom JS	Add-on libraries
Security	Needs frequent updates, many plugins (risk)	More secure core, fewer exploits known	Very secure (no DB)	Secure if updated

Feature	WordPress	Drupal	Static Site (Jekyll)	Wagtail/Django
Hosting	Standard LAMP or WP host	Standard LAMP	Any static host (Netlify, GitHub Pages)	Python host (Heroku, AWS)
Scalability	Handles moderate traffic; requires caching at high load	Good for high complexity	Very high (CDN)	Good with proper setup
Cost	Low software cost; hosting \$5-\$20/mo	Similar or higher	Hosting free/low	Python hosting \$10-20/mo

Hosting Options

Environment	Pros	Cons	Suitability
Shared WP Host	Cheap, easy managed PHP/MySQL	Limited resources, shared IP	Small site (low traffic)
Managed WP (WP Engine)	Automatic updates, strong support	Expensive, proprietary	If budget allows robust managed service
VPS/Cloud (AWS, DO)	Scalable, full control	Requires sysadmin	Mid-sized site, flexible development
Static Host (Netlify)	Free SSL, Git integration	Limited dynamic features	Static site (no login), very fast
Local DataCenter	Data sovereignty (if needed)	Possibly costly, maintenance	If government/local mandate

Trade-offs: Managed hosting (WP Engine) simplifies maintenance but costs. Static hosting (Netlify) is cheap and secure but requires a static setup; no user logins unless custom. VPS offers flexibility but needs technical upkeep.

Feature Trade-offs

- **Web vs Mobile App:** A responsive website reaches both desktop and mobile users without app store friction. A separate mobile app could offer offline caching or push notifications but needs development for Android/iOS. Given resources, a mobile-friendly website is priority.
- **Dynamic vs Static Content:** Dynamic CMS allows easy updates by non-tech users. Static site is faster/secure but editing requires technical steps. If local admins are not comfortable with coding, a CMS like WordPress is preferable.
- **Social Features:** Enabling comments or user accounts can engage community but invites moderation needs (and potential misuse). These should be considered only if resources exist to manage them.

Visuals and Diagrams

Sitemap Diagram: Shows site structure as outlined above.

```
flowchart TB
    Home --> History
    Home --> Culture
    Home --> Festivals
    Home --> Governance
    Home --> Economy
    Home --> Infrastructure
    Home --> Institutions
    Home --> Gallery
    Home --> Contact
```

Data Model (ER Diagram): Represents how core data (Communities, Institutions, People, Events) relate.

```
erDiagram
    COMMUNITY ||--o{ INSTITUTION : has
    COMMUNITY ||--o{ PERSON : includes
    COMMUNITY ||--o{ EVENT : organizes
    INSTITUTION ||--o| PERSON : managed_by
    PERSON ||--o{ EVENT : attends
    EVENT }o--|| LOCATION : held_at
    COMMUNITY {
        string name
        string description
        float latitude
        float longitude
    }
    INSTITUTION {
        string name
        string type
        string description
    }
    PERSON {
        string name
        string role
    }
    EVENT {
        string name
        date date
        string type
    }
```

```
LOCATION {
    float latitude
    float longitude
    string description
}
```

These diagrams can guide developers and stakeholders on site organization and data relationships.

Cultural Photos: We suggest including images of local fishermen, marketplace, or community gatherings (subject to permissions). The embedded figures above are generic Kalabari cultural illustrations. Future site content should aim to use photos taken in KE Town (with consent) to personalize the experience.

In conclusion, KE Town's community site should blend informative content (history, culture, institutions) with interactive features (map, gallery) and engage both residents and visitors. Technical choices (CMS, hosting, mobile design) should balance ease of use and low cost. Where information is missing, the site itself could become a research tool by crowdsourcing knowledge from the community.
